

Harmony Veterinary Clinic

780 Oak Creek Drive, Cedar Park, TX 78613
Tel: (737) 555-0204 | Vet License: TX-DVM-072905
Attending Veterinarian: **Dr. Priya Nair, DVM, DAVDC**

DISCHARGE SUMMARY — DENTAL PROCEDURE

Note Type:	DISCHARGE_SUMMARY	Date of Visit:	2024-09-05
Patient:	Luna	Owner:	Priya Sharma
Species:	Feline	Breed:	Domestic Shorthair
DOB:	2020-01-30	Weight:	4.8 kg

REASON FOR ADMISSION

Luna was admitted for dental prophylaxis and oral surgery under general anaesthesia. Owner reported halitosis for approximately 3 months and reduced interest in dry kibble. Oral examination at pre-admission wellness visit (2024-08-22) identified Grade 3 periodontal disease involving the right maxillary 4th premolar (108) and left mandibular 1st molar (309), with tooth resorption lesions (FORL Type 2) on both teeth.

PRE-OPERATIVE ASSESSMENT

Pre-anaesthetic bloodwork (CBC + chemistry panel, 2024-09-05, in-house): all parameters within normal limits for a cat of this age. ASA classification: Grade II. Anaesthetic risk discussed with owner; informed consent obtained. Patient fasted for 12 hours pre-operatively.

PROCEDURE PERFORMED

Induction: Alfaxalone 2 mg/kg IV. Maintenance: Isoflurane in O2 via endotracheal tube. Monitoring: ECG, SpO2, ETCO2, temperature throughout. Full mouth dental radiographs obtained confirming FORL Type 2 lesions on teeth 108 and 309 with no root remnant complications. Procedures performed: 1. Supragingival and subgingival scaling — all teeth (hand and ultrasonic). 2. Polishing — all teeth. 3. Closed extraction — tooth 108 (right maxillary 4th premolar): sectioned and extracted; alveolus irrigated; 3-0 Vicryl suture closure. 4. Closed extraction — tooth 309 (left mandibular 1st molar): sectioned and extracted; alveolus irrigated; 3-0 Vicryl suture closure. 5. Extraction sites inspected; no root fragments retained. Total anaesthesia time: 58 minutes. Recovery: uneventful; extubated at 14:32.

POST-OPERATIVE FINDINGS & ASSESSMENT

1. Feline odontoclastic resorptive lesions (FORL), Type 2 — teeth 108 and 309 (extracted). 2. Generalised periodontal disease, Grade 3 — scaling and polishing completed; remaining dentition in acceptable condition post-procedure. 3. No intraoperative complications.

DISCHARGE INSTRUCTIONS

Medications dispensed: - Amoxicillin-clavulanate 62.5 mg PO BID x 7 days (antibiotic). - Meloxicam oral suspension 0.05 mg/kg SID x 5 days (NSAID analgesia). Diet: Soft food only for 10–14 days. No dry kibble until suture recheck. Activity: Restrict activity for 24 hours post-anaesthesia. Recheck: 10–14 days for suture inspection and extraction site healing assessment. Owner to monitor for: persistent bleeding, swelling, lethargy, or reduced appetite.

EXPECTED CODING OUTPUT (test validation reference)

Expected Code	System	Category	Confidence Tier
K03.3	ICD-10-CM	DIAGNOSIS	HIGH

K05.31	ICD-10-CM	DIAGNOSIS	HIGH
0CTRXZZ	ICD-10-PCS	PROCEDURE	HIGH
8E0ZXYZ	ICD-10-PCS	PROCEDURE	HIGH
Z98.810	ICD-10-CM	PROCEDURE	HIGH

Test assertion: FORL coded as DIAGNOSIS with HIGH confidence | 2 separate extraction procedure codes (one per tooth) | antibiotic and NSAID coded as MEDICATION category | requires_review = false
