

REQUEST DETAILS

Verification ID:	f5a6b7c8-d9e0-1234-f012-567890123456	Submitted:	2024-09-22
Member ID:	MEM-04415	Policy ID:	N/A (Enrolment)
Pet Name:	Whiskers	Context:	ENROLMENT

BREED ASSESSMENT

	Declared (Policyholder)	Predicted (AI Vision)
Species	Feline	Feline
Breed	Persian	Persian
Risk Tier	Tier 3 — High	Tier 3 — High
Confidence	—	92%
Consistency		MATCH
Tier Delta		0

Top-3 Breed Predictions:

Rank	Breed	Confidence	Risk Tier	Notes
1	Persian	92%	Tier 3 — High	Breed match confirmed visually
2	Exotic Shorthair	5%	Tier 3 — High	Closely related; longer coat present
3	Himalayan	3%	Tier 3 — High	Colourpoint pattern not present

Visual Characteristics Identified:

Flat brachycephalic face — classic Persian facial structure
Long, dense, silky white coat in pristine show condition
Large, round copper eyes — characteristic of the breed
Studio-quality lighting with seamless white background
Professional grooming — symmetrical coat presentation atypical of owner photos

FRAUD SIGNALS

Rule	Signal Type	Severity	Detail	Similarity
FD-05	STOCK_PHOTO	HIGH	CLIP embedding cosine similarity of 0.96 against fingerprint ID SP-001	96%
FD-06	METADATA_ANOMALY	HIGH	EXIF metadata entirely absent. Image dimensions (3000x2000) and DPI (300) consistent with p	100%

IMAGE QUALITY

Resolution:	3000x2000	EXIF Metadata:	ABSENT
Quality Score:	98%	Subject Coverage:	85%
Image Quality Verdict:		ACCEPTABLE	

NOTE: Paradoxically high quality score (0.98) is itself a fraud signal — owner-submitted photos rarely achieve professional studio quality.

OUTCOME

FRAUD_FLAG issued under rules FD-05 (stock photo, similarity 0.96) and FD-06 (metadata anomaly — no EXIF, professional studio image dimensions). Breed match is irrelevant as the photograph does not represent an actual enrolled pet. The policyholder appears to have submitted a commercially licensed stock photograph in lieu of an actual pet photo, suggesting the pet may not exist. Enrolment DECLINED. Member account flagged for fraud review. No policy to be issued until a verified original photo with EXIF metadata is provided and identity of the pet can be independently confirmed.

TEST ASSERTIONS (validation reference)

<i>overall_verdict = FRAUD_FLAG recommended_action = DECLINE</i>
<i>fraud_signals count = 2 FD-05 severity = HIGH FD-06 severity = HIGH</i>
<i>fraud_signals[0].similarity_score = 0.96 (threshold = 0.92 for stock photo)</i>
<i>image_quality.has_exif = false quality_score = 0.98 (anomalously high)</i>
<i>breed_assessment.declared_vs_predicted = MATCH — breed check is irrelevant when photo is fraudulent</i>
<i>Enrolment declined — case escalated to fraud team</i>
