

Historical Medical Records — Charlie

LifeGroup Pet Insurance — Historical Medical Records Bundle

BUNDLE SUMMARY

Patient:	Charlie	Species:	Canine
Breed:	Labrador Mix	Date of Birth:	2015-03-22
Owner:	Marcus Williams	Policy Start:	2023-03-01
Date Range:	Mar 2020 – Jun 2023	Source Clinics:	2 clinic(s)
Est. Pages:	28	Bundle Type:	Historical Medical Records

Annual Wellness (Age 5) | 2020-03-25 | Greenfield Animal Hospital | Dr. S. Okonkwo | [p.2]

A/P: Annual wellness. Weight 31.8 kg. BCS 5/9. All systems normal. Hip and elbow conformation noted as good. No gait abnormality. Vaccines updated.

Lameness Evaluation (Age 6.5) | 2021-09-12 | Greenfield Animal Hospital | Dr. S. Okonkwo | [p.5]

S:

Owner reports Charlie has been 'stiff in the mornings' for approximately 3 months. Reluctant to rise from rest. Walks normally once warmed up.

O:

Weight 32.8 kg. BCS 6/9. Mild stiffness on bilateral hip extension. No overt pain response on palpation. Gait mildly stiff after prolonged rest.

A:

Bilateral hip stiffness — mild. Rule out early hip dysplasia vs. age-related musculoskeletal changes. Breed predisposition (Labrador type) noted.

AMBIGUOUS / REVIEW NEEDED: 'Rule out hip dysplasia' documented 2021-09-12 — 18 months BEFORE policy start (2023-03-01). Not confirmed diagnosis — PE-02 (symptoms) or PE-03 (single ambiguous note) applicable. Requires underwriter determination under policy definition of pre-existing.

P:

Radiographs recommended — owner declined at this time. Meloxicam 7.5 mg PO SID x 10 days. Weight management discussed. Recheck if worsening.

Follow-up Lameness | 2022-06-18 | Greenfield Animal Hospital | Dr. S. Okonkwo | [p.9]

S:

Morning stiffness persisting intermittently over past 9 months. Owner notes episodes more frequent in cold weather.

A:

Recurrent bilateral hip stiffness. Degenerative changes suspected. Hip dysplasia remains on differential. Radiographs strongly recommended.

AMBIGUOUS / REVIEW NEEDED: SECOND MENTION of hip-related stiffness — 2022-06-18. 9 months before policy start. PE-02 rule likely triggered (symptoms ≥ 2 times pre-policy). Breed-linked condition — PE-07 also applicable.

P:

Owner consents to radiographs — scheduled at referral centre. Carprofen dispensed pending imaging.

Radiograph Report | 2022-07-05 | Texas Veterinary Specialists | Dr. A. Osei | [p.13]

Radiographic findings:

Pelvis VD and hip extension views obtained. Mild subluxation of bilateral coxofemoral joints. Norberg angle: right 98 degrees, left 96 degrees (normal ≥ 105 degrees). Early osteophyte formation at right acetabular rim. IMPRESSION: Bilateral hip dysplasia, mild-to-moderate. Early DJD changes right hip.

AMBIGUOUS / REVIEW NEEDED: RADIOGRAPH CONFIRMS hip dysplasia — 2022-07-05, 8 months before policy start (2023-03-01). Confirmed diagnosis pre-dates policy. PE-01 now applicable. However, this conflicts with policy definition ambiguity — refer to OQ-01.

Orthopaedic Recheck | 2023-01-22 | Greenfield Animal Hospital | Dr. S. Okonkwo | [p.17]

A/P: Hip dysplasia — progressive. Increased carprofen to 50 mg PO SID. Joint supplement (Cosequin DS) added. Weight management ongoing. Orthopaedic surgery consultation discussed for FHO if progression continues.

Post-policy Orthopaedic Review | 2023-05-15 | Greenfield Animal Hospital | Dr. S. Okonkwo | [p.21]

A/P: Hip dysplasia — bilateral, moderate. Pain worsening on right. Referral for FHO (femoral head ostectomy) right hip recommended.

NOTE: This visit is AFTER policy start (2023-03-01). Claim for FHO surgery filed post-policy. Adjudication depends on pre-existing determination from earlier records.

EXPECTED REVIEW OUTPUT (test validation reference)

overall_verdict = NEEDS_REVIEW | underwriting_recommendation = MANUAL_UNDERWRITE

Hip dysplasia: classification = PRE_EXISTING_PROBABLE (PE-02) OR PRE_EXISTING_CONFIRMED (PE-01 from radiology)

First symptom mention: 2021-09-12 | First confirmed diagnosis (radiology): 2022-07-05

Both dates are pre-policy (policy_start = 2023-03-01)

PE-07 also triggered — breed-linked condition (Labrador) escalates to PRE_EXISTING_PROBABLE

is_chronic = true (CD-01: 3 mentions over 21-month span)

Confidence = MEDIUM — ambiguous between PE-01 and PE-02 depending on policy definition (OQ-01)

Underwriter must decide: does confirmed radiograph (pre-policy) constitute pre-existing under policy terms?
