

Historical Medical Records — Max

LifeGroup Pet Insurance — Historical Medical Records Bundle

BUNDLE SUMMARY

Patient:	Max	Species:	Canine
Breed:	Golden Retriever	Date of Birth:	2014-11-05
Owner:	Robert Chen	Policy Start:	2022-09-01
Date Range:	Nov 2018 – Aug 2022	Source Clinics:	3 clinic(s)
Est. Pages:	45	Bundle Type:	Historical Medical Records

NOTE: Records sourced from 3 clinics — Greenfield Animal Hospital (primary care), BluePaw Emergency Center (emergency visits), Texas Veterinary Specialists (oncology). Record gap detected: March 2020 – November 2020 (8 months — COVID-related disruption).

Annual Wellness (Age 4) | 2018-11-08 | Greenfield Animal Hospital | Dr. S. Okonkwo | [p.2]

A/P: Annual wellness. Weight 33.2 kg. All systems normal. Golden Retriever — owner counselled on breed cancer predisposition and importance of regular lymph node checks.

Annual Wellness (Age 5) | 2019-11-14 | Greenfield Animal Hospital | Dr. S. Okonkwo | [p.4]

O:

Weight 34.0 kg. Exam unremarkable. Mild bilateral submandibular lymph node enlargement noted — soft, discrete, non-painful. Owner reports no illness.

A:

Mild lymphadenopathy — bilateral submandibular. Likely reactive. No other abnormalities. Monitor and recheck in 6 weeks.

AMBIGUOUS / REVIEW NEEDED: LYMPHADENOPATHY documented 2019-11-14 — 34 months before policy start. Described as 'likely reactive' — differential for lymphoma not explicitly raised. CD-03 (pattern without diagnosis) and PE-03 (single ambiguous mention) applicable.

Lymph Node Recheck | 2020-01-10 | Greenfield Animal Hospital | Dr. S. Okonkwo | [p.7]

O / A:

Submandibular lymph nodes: mildly enlarged but unchanged from November. No new lymph node involvement. No systemic signs. Continue monitoring. FNA not pursued — owner declined.

AMBIGUOUS / REVIEW NEEDED: SECOND LYMPHADENOPATHY MENTION — 2020-01-10. Nodes 'unchanged' — persistent enlargement. PE-02 triggered (symptoms ≥ 2 times). CD-03 pattern building.

[RECORD GAP: March 2020 – November 2020 — 8 months. No records available. CD-07 flag: RECORD_GAP.]

Sick Visit — Lethargy / Weight Loss | 2020-11-22 | Greenfield Animal Hospital | Dr. S. Okonkwo | [p.10]

S:

Owner reports Max lethargic for 3 weeks, reduced appetite, weight loss of approximately 2 kg since last visit (8+ months ago).

O:

Weight 31.8 kg (was 34.0 kg — 6.5% weight loss). Generalised peripheral lymphadenopathy: submandibular, prescapular, popliteal, inguinal nodes all enlarged (2–4x normal size), firm, non-painful.

Test	Result	Reference Range	Flag
CBC — WBC	28.4 x10 ⁹ /L	6.0–17.0 x10 ⁹ /L	HIGH
Lymphocytes	18.2 x10 ⁹ /L	0.8–5.1 x10 ⁹ /L	HIGH
Albumin	2.1 g/dL	2.7–3.8 g/dL	LOW
LDH	612 U/L	< 400 U/L	HIGH

PRE-EXISTING SIGNAL: GENERALISED LYMPHADENOPATHY + CBC ABNORMALITIES — 2020-11-22. 22 months BEFORE policy start (2022-09-01). Lymphoma highly suspected.

A:

Generalised peripheral lymphadenopathy with constitutional signs (weight loss, lethargy). Lymphoma high on differential. Urgent oncology referral.

Oncology Consultation | 2020-12-03 | Texas Veterinary Specialists — Oncology | Dr. T. Nakamura, DACVIM (Oncology) | [p.15]

FNA cytology of left prescapular lymph node:

Cytological findings consistent with high-grade B-cell lymphoma. Immunophenotyping pending. Chest radiographs: mild mediastinal lymphadenopathy.

PRE-EXISTING SIGNAL: LYMPHOMA CONFIRMED — 2020-12-03. B-cell lymphoma, high grade. 21 months pre-policy. PE-01 — confirmed diagnosis pre-policy start. First lymphadenopathy signal: 2019-11-14 (25 months pre-policy).

P: CHOP chemotherapy protocol initiated (cyclophosphamide, doxorubicin, vincristine, prednisolone).

Oncology Recheck — Remission | 2021-06-15 | Texas Veterinary Specialists | Dr. T. Nakamura | [p.21]

A/P: B-cell lymphoma — complete remission achieved after 6 CHOP cycles. Lymph nodes normalised. No residual disease on imaging. Surveillance monitoring every 3 months.

Oncology Surveillance | 2022-03-10 | Texas Veterinary Specialists | Dr. T. Nakamura | [p.26]

A/P: B-cell lymphoma — remission maintained at 15 months. No lymphadenopathy. CBC normal. Continue 3-month surveillance.

Pre-enrolment Health Summary | 2022-08-08 | Greenfield Animal Hospital | Dr. S. Okonkwo | [p.30]

A/P: Max in clinical remission from high-grade B-cell lymphoma (diagnosed Dec 2020). 18-month remission. Otherwise healthy. Insurance health summary issued. Owner and insurance company to be aware of lymphoma history.

PRE-EXISTING SIGNAL: PRE-ENROLMENT SUMMARY confirms lymphoma history. Policy start: 2022-09-01.

EXPECTED REVIEW OUTPUT (test validation reference)

overall_verdict = PRE_EXISTING_FOUND | underwriting_recommendation = APPROVE_WITH_EXCLUSIONS or DECLINE

Lymphoma: classification = PRE_EXISTING_CONFIRMED | first_occurrence = 2020-12-03 (confirmed)

PE-01 applied | is_chronic = true (CD-01: multiple mentions over 20 months)

CD-03: pattern_without_diagnosis flagged from 2019-11-14 (lymphadenopathy pre-diagnosis)

<i>CD-04: weight loss > 10% flagged (34.0 → 31.8 kg = 6.5% — borderline; check threshold config)</i>
<i>RECORD_GAP: 2020-03-01 to 2020-11-22 flagged (CD-07) — 8-month gap</i>
<i>source_clinics count = 3: Greenfield, BluePaw (not used), Texas Vet Specialists</i>
<i>earliest_date = 2018-11-08 total_pages ~ 45</i>
<i>supporting_evidence cites verbatim lymphoma confirmation from p.15 (2020-12-03)</i>
